Data Structures Practical

Practical – VI

(Poisson Distribution)

Roll No.: S009	Name: Shubham Gawde
Class: SYIT	Batch: 1
Date of Assignment: 25/6/26	Date/Time of Submission: 25/6/26

PART – A

Array Operations:

Write a program to implement basic array operations:

a. Insert an element at a specific position in an array.

b. Delete an element from a specific position in an array.

c. Search for an element in an array (linear search).

PART B :

Solution:

a. Insert an element at a specific position in an array.

```
array = [1, 2, 3, 4, 5, 6, 7]

pos = int(input("Enter your index: "))
ele = int(input("Enter your element: "))

array.insert(pos, ele)
print(array)

print("S009")
```

```
Enter your index: 3
Enter your element: 10
[1, 2, 3, 10, 4, 5, 6, 7]
S009
```

b. Delete an element from a specific position in an array.

```
array = [1,2,3,4,5,6,7]

pos = int(input("Enter your index : " ))
ele = int(input("Enter your element : " ))

array.insert(pos,ele)
print(array)

eledel = int(input("Enter your index to delete :"))
array.pop(eledel)
print(array)

print("S009")
```

```
Enter your index : 3
Enter your element : 10
[1, 2, 3, 10, 4, 5, 6, 7]
Enter your index to delete :5
[1, 2, 3, 10, 4, 6, 7]
S009
```

c. Search for an element in an array (linear search).

```
array = [1,2,3,4,5,6,7]

num = int(input("Enter element : " ))
flag = 1

for i in array:
    if i==num:
        flag = 0
        break

if flag==0:
    print("Element found")
else:
    print("Element Not found")

print("S009")
```

```
Enter element : 11
Element Not found
S009

=======================
Enter element : 5
Element Not found
S009
```
